

# Brownfields Site Inventory Tool

## What Is BIT?

**The Brownfield Inventory Tool (BIT) is a Free, web-based, comprehensive site inventory and brownfields program management tool. BIT was designed especially for users working under an Environmental Protection Agency (EPA) cooperative agreement requiring the submittal of a Property Profile Form, but any entity working on establishing a site inventory database will find BIT very helpful. Cities, regional coalitions, and Tribes can also use BIT to consolidate environmental and administrative information from sites in multiple programs.**

**Users may enter detailed site data, upload documents and data, and generate and export a variety of reports, including the Property Profile Form. BIT can also be used as a collaborative tool where specific inventory data can be accessed by multiple users IF permission by the primary user is granted. All information entered into BIT is username/ password protected to ensure privacy.**

**BIT is very user friendly and instructions can be found on every page of the program.**

**BIT was developed by the TAB (Technical Assistance to Brownfields communities) program at Kansas State University with funding from the U.S. Environmental Protection Agency (EPA) under Cooperative Agreement TR83389401.**

## BIT Advantages

- *Help meet EPA site inventory, public record and notice, and reporting requirements*
- *All site data available in your own password protected database*
- *Multiple entities may work together to create/use the database*
- *All information/data entered into BIT is password protected to prevent unauthorized use*
- *Data can easily be imported or exported for individual or multiple sites*
- *A mapping feature allows viewing of site or sample locations*
- *Instructions available on every page in BIT*
- *Contains additional brownfields-related resources*
